WASHINGTON, DC

The Center for the Advanced Study of Hominid Paleobiology  
at the George Washington University presents

## **Evolving Larger Brains: Causes & Consequences**

*by*

**Dr. Georg Striedter**

Professor of Biological Sciences  
University of California - Irvine

***When: Wed, October 31 at 10:00am***

***Where: Marvin Center, Room 309***

***800 21<sup>st</sup> Ave NW***

Georg Striedter is a comparative neurobiologist whose research focuses on an array of vertebrate brains, including those of birds and fishes. His work involves studying the developmental processes behind neural specializations. His seminal book, [Principles of Brain Evolution](#), explores the rules that govern brain development across vertebrates.
